

We are a small water system providing water to 4,100 homes in the Crestview, Fl, area. We use a Ground Penetrating Radar (GPR) system to locate water lines. We sacrificed to pay for this system and, would suffer great loss if we were denied use of it. We have been in existence for about 30 years and have many old and substandard lines which must be upgraded. Without the GPR it would be very time consuming and costly to locate these old lines. Please do not take this technology away from us.
